New and Improved Features

Recent Files – Pin Sort	The pinned files in the Recent Files list are now sorted alphabetically. The list was previously sorted based on when the file was last opened.
Recent Files in the Mindjet Files window	The Recent Files list now appears in the Mindjet Files window.
Exit Walk Through mode with the Escape Key	The escape key can now be used to exit the Walk Through mode.
List View for your Map Parts	In the Map Parts pane, you can use the context menu of a Map Part to switch from viewing the thumbnails for Map parts to a list of Map Parts.

Resolved Issues

Mindjet Files

Issue:	Data lost when opening and editing checked out maps with different clients (e.g. Mac, Windows, Web, Mobile).
Resolution:	The file can only be edited by the client where it is checked out. If a file was checked out on a different client and you open it with this Windows version, you can either open it as read-only or choose to discard your previous changes and check it out to make edits with Mindjet for Windows.
Issue:	Users are able to Revert a map to a previous version when the map is opened for editing (or actually being edited by one or more people).
Resolution:	The Revert Version option is disabled if the map is opened for editing by any user.

Known Issues

Issue: An error is displayed when you attempt to revert a saved version when the map is already opened.

Workaround: Close the map before reverting to a previous version.

Removed Features

No features were removed in this version. See previous release notes for full list of removed features.
